Voluntary Workers at the Clinics.

Mrs. ADAMS, 239, Lockoford Lane, Chesterfield.

Mrs. BARKER, 41, Sterland Street, Chesterfield.

Mrs. CALWAY, Manor House, Brimington, near Chesterfield.

Mrs. W. H. EDMUNDS, Elm Lodge, Storrs' Road, Chesterfield.

Mrs. G. J. EDMUNDS, "Ivycourt," Brookside, Chesterfield.

Mrs. GRATTON, 42, Newbold Road, Chesterfield.

Mrs. HAIGH, 111, Newbold Road, Chesterfield.

Mrs. McEWAN, Elm Lodge, Storrs' Road, Chesterfield.

Mrs. NIND, 11, Brearley Street, Old Whittington.

Mrs. OWEN, Holly House, Norbriggs.

Mrs. SANDERS, 28, Rhodes Avenue, Chesterfield.

Miss SHENTALL, Lyndhurst, Abercrombie Street, Chesterfield.

Mrs. SHORT, Rockley Cottage, Westfield Avenue, Chesterfield.

Mrs. SIMS, 61, Wellington Street, New Whittington,
Chesterfield.

Mrs. STATON, Ingledene, Brookside, Chesterfield.

Mrs. SWALLOW, 698, Brookside, Chesterfield.

Mrs. TAKON, 212, South Street, New Whittington.

Miss TAYLOR, 112, Newbold Road, Chesterfield.

Mrs. TUCKER, The Cedars, Newbold Road, Chesterfield.

Mrs. WARD, Devonshire Avenue, New Whittington,
Chesterfield.

Mrs. WILKINSON, 187, Old Road, Chesterfield.

PUBLIC HEALTH DEPARTMENT,

TOWN HALL,

CHESTERFIELD,

June, 1938.

*To the Chairman and Members of the Health Committee
of the Borough of Chesterfield.*

Mr. Chairman, Ladies and Gentlemen,

I have the honour to submit my ninth Annual Report on the Health and Sanitary Conditions of the Borough for the year 1937.

The Report has been drawn up in accordance with the requirements of the Ministry of Health.

A perusal of the information given in the Report shows that the general health of the Borough has been satisfactory during the year and it is pleasing to note that the Infantile Mortality Rate of 53 is the lowest ever recorded in the Borough.

The new Municipal Midwifery Service came into operation on August 1st, 1937, and I am pleased to say that it is working smoothly and satisfactorily.

I have again to sincerely thank you, Sir, and the Members of the Health Committee, for your continued interest and support, and also my colleagues in other departments.

In conclusion, I wish to thank Mr. Carter, Chief Sanitary Inspector, for his valuable co-operation in the writing of the sanitary section of this Report, and also to express my thanks to all the members of the Staff of the Health Department for the loyal support they have given me during the year.

I am, Ladies and Gentlemen,

Your obedient Servant,

J. A. STIRLING,
Medical Officer of Health.

Report of the Medical Officer of Health for the Year 1937.

NATURAL AND SOCIAL CONDITIONS OF THE AREA.

The area of the Borough is 8,472 acres. The population estimated by Registrar General to middle of 1937 is 64,550; and it is upon this figure that the calculations in this Report have been based.

Appendix 2.

Physical Features of the Area. Chesterfield is built mainly on clay, but there are also areas of rock, shale and coal, rendering the whole drainage of the ground much better than if wholly consisting of clay.

Social Conditions of the Area. The social conditions of the Borough are mainly industrial, the chief occupations of the inhabitants being Coal Mining, Engineering, Pottery-making, Box-making, and the manufacture of Surgical Dressings.

VITAL STATISTICS.

(a) The estimated population of the Borough at mid-1937 was 64,550, as against an estimate in 1936 of 64,530, an increase of 20.

Appendix 3.

The rateable value of the Borough in 1937 was £374,246, the product of a penny rate being £1,450, as against the corresponding figures of £360,524 and £1,420 for 1936.

(b) *Births.* The total number of births in the Borough was 994, giving a birth rate of 15.4 as against a rate of 15.7 in 1936. The birth rate for England and Wales for 1937 was 14.9.

Appendices 3 & 4.

On examining the number of births in the various wards of the Borough, it will be seen that Rother (18.1%) and the Newbold (12.2%) wards have the highest percentage of the total births, while the St. Helen's (4.5%) and the New Whittington (5.6%) wards have the lowest percentage.

Natural Increase. The excess of births over deaths was 206, giving a rate of 3.2 per 1,000 of the population.

Appendix 4.

(c) *Deaths.* During 1937, 788 deaths took place, giving a crude death rate of 12.2 and an adjusted death rate of 13.9, as compared with rates of 11.4 and 12.9 for 1936. The death rate for England and Wales was 12.4.

*Appendices 3, 5, 6,
7 & 11.*

Appendices 5, 7. The biggest percentage of deaths occurred in the Rother (14.1%) and the St. Leonard's (12.9%) wards, and the lowest percentage in the St. Helen's (4.6%) and the New Whittington (5.2%) and West (5.2%) Wards.

Appendix 6. *Age Distribution and Causes of Death.* The total number of deaths during the year is 49 more than the figure for last year. There is nothing to record in the way of any special disease prevalence or cause of death during the period under review. There are no conditions of occupation or environment which appear to have had any prejudicial effect on health.

GENERAL PROVISION OF HEALTH SERVICES IN THE AREA.

Appendices 20 & 24. There have been no alterations in the hospital accommodation during the period under review.

Further particulars of the hospitals provided or subsidised by the Local Authority or by the County Council will be found in Appendix 24.

Ambulance Facilities. Motor ambulances are provided for the removal of cases of infectious disease, and also for use in non-infectious cases.

Appendix 23. *Clinics and Treatment Centres.* Particulars under this heading will be found in Appendix 23.

Appendix 1. *Public Health Staff.* On the 1st August the Municipal Midwifery Service, under the Midwives Act, 1936, came into operation. Seven of the midwives practising in the Borough were appointed as Municipal Midwives, and Mrs. S. M. Street, Health Visitor, was appointed Supervisor of Midwives. The vacancy on the Health Visiting Staff was filled by the appointment of Miss R. Hancock.

PROFESSIONAL NURSING IN THE HOME.

Appendix 22. Skilled professional nursing in the homes of the people is provided for general medical and surgical cases and for certain infectious diseases, by the visiting Nursing Service of the Borough Welfare Committee of the Corporation. The Corporation pay an annual grant of £255 for specific services rendered by the Nurses in the home-nursing of Measles, Ophthalmia Neonatorum, Whooping Cough, Puerperal Fever, Enteritis and Poliomyelitis.

A summary of the work of the nurses during 1937 will be found in Appendix 22.

Midwives. Twenty-three midwives notified their intention to practise in the Borough in 1937. Five midwives claimed compensation under the provisions of the Midwives Act, 1936, and surrendered their certificates. The Municipal Midwifery Scheme is outlined under the Maternity and Child Welfare section, later in this report. One of the municipal midwives, with the approval of the Central Midwives' Board, undertakes the district training of pupils from the Corporation Maternity Home.

Appendix 28.

Maternity and Nursing Homes. At the beginning of 1937 there were seven registered Homes in the Borough; two as Nursing Homes only and five as Maternity Homes only. During the year three Maternity Home Registrations were cancelled owing to the fact that two of the owners claimed compensation under the Midwives Act, 1936, and in the case of the third, the Nurse owning the Home was appointed a Municipal Midwife.

All the Homes in the Borough have been conducted satisfactorily during the year.

Chemical Work. The analysis of food and drugs is carried out for the Corporation by Messrs. A. H. Allan & Partners, of Sheffield. Mr. John Evans, of this firm, is the Public Analyst for the Borough. Full particulars of the work will be found in Appendix 37.

Appendix 37.

Legislation in Force. All particulars relating to the legislation in force in the Borough will be found in Appendix 21.

Appendix 21.

SANITARY CIRCUMSTANCES OF THE AREA.

Water. Generally speaking, the water supply is abundant and of good quality. The installation of softening plants at the pumping stations now ensures that no water is supplied having a greater hardness than 6°. The Board are taking steps to minimise any risk of pollution which may arise on the Linaere Gathering Ground. Frequent bacteriological analyses are being made of the various sources of water supply. These analyses are submitted to the Medical Officer of Health and the closest co-operation exists between the Water Board and the Health Department, and the results of all analyses made during the year under review have been satisfactory.

Rivers and Streams. It was not found necessary to take any action under this heading during the period under review.

Drainage and Sewerage. Particulars of new sewers laid during the year will be found in Appendix 42.

Sewage Disposal. The extensions to the Sewage Works, outlined in the Report for 1936, were commenced in January, 1937, and have gone on throughout the year. Good progress has been made, but none of the work brought into operation, with the exception of the sludge drying beds in order to facilitate the normal working of the plant during the extensions.

The full flow of sewage was treated throughout the year, and without nuisance to the surrounding district. The percentage purification effected during the year between the Crude Sewage and Effluent maintained an average of 88.6%.

*Appendix
29.*

Closest Accommodation. The types of convenience used in connection with dwellinghouses are shown by ward incidence in the Appendix, from which it will be noted that there are 16,411 W.C.s, 247 trough and waste water closets and 109 privies, the latter type being confined to those outlying portions of the Borough which are not supplied with sewerage or main water supply.

During the year, 3 privies were converted into W.C.s.

*Appendix
41.*

Scavenging. The removal and disposal of house refuse is undertaken by the Cleansing Department of the Corporation, and a summary of the work done will be found in Appendix 41.

*Appendices
30, 31 &
32.
Appendix
33.*

Sanitary Inspection of the Area. Details of this work will be found in the appropriate appendices.

Smoke Abatement. During the year, 152 half-hourly observations were taken from 20 works' chimneys, resulting in an average number of minutes of black smoke per observation for the total number of observations of .5.

On four occasions the Byelaws, which allow a maximum of 3 minutes of black smoke in any continuous period of 30 minutes, were exceeded. Representations were made to the owners of the works concerned but no legal proceedings were taken.

*Appendix
34.*

Premises Controlled by Regulations or Byelaws. The number and character of these places will be found in Appendix 34.

Swimming Baths and Pools. There are one indoor swimming bath and two open-air swimming pools in the Borough, all of which are owned by the Corporation. The Health Department exercises supervision over these baths and samples are taken to ensure the satisfactory condition of the water.

Eradication of Bed Bugs. Ninety-five Corporation houses and 40 privately owned houses were found to be infested and were subsequently disinfested.

The methods employed for freeing infested houses from bed bugs was by the use of an insecticidal spray such as Solution D, Kilerobe and Zaldecide being used in turn,

The method employed to ensure the furniture being free from vermin before being removed into Council houses is as follows :—

The furniture is collected by the Council in vans which bring the furniture to the Council's dépôt for disinfection by Hydrogen Cyanide gas. This agent is used directly in gaseous form contained in tins supplied by the London Fumigation Company. The process is carried out by the Council's employees who were trained in the work by the firm above named, and they wear gas masks as the tins require to be punctured by hand, immediately after which the van is sealed. Before the gas is liberated the van is pre-heated by an electric heater and the furniture is kept under gas for about three hours, after which it is well exposed to air. The bedding is held back for a longer period and tested for freedom from gas and delivered to the new house later than the furniture.

The furniture of sixty-one houses was so dealt with during the year.

All disinfection is carried out by the Local Authority.

Common Lodging Houses. During the year one Lodging House, "The Swan," was closed owing to being incorporated in a Clearance Area. There are, therefore, now three Common Lodging Houses, all for men only, and with a total accommodation of 206 persons. Two of the houses are privately owned while the third, the Markham Hostel of 83 beds, is owned and managed by the Corporation. This Hostel was, during the year, materially improved by the installation of new central heating and further domestic hot water supplies; new electric lighting throughout; the provision of a certain number of separate cubicles and the provision of improved quarters for, and the appointment of a new married caretaker. The cost was £1,410. The Supervisor of the Hostel is the Chief Sanitary Inspector.

Factory and Workshops Act. Ninety visits were made to factories and workshops during the year, and a summary of these visits will be found in the appendix.

Offensive Trades. The total number of these trades, which include fried fish shops, is 71. These are shown by an asterisk in the appendix.

INSPECTION AND SUPERVISION OF FOOD.

Milk Supply.

MILK REGISTER.

Number of Registered Milk Producers in the Borough	67
Number of Cowsheds in the Borough	94
Approximate number of Cows housed	656
Number of Registered Producers residing outside the Borough	96
Number of Retailers (not producers) residing in the Borough	121
Number of Retailers (not producers) residing outside the Borough	22
Number of Inspections of Dairies, Cowsheds and Milkshops	422

Milk and Dairies Order, 1926, and Improvements to Cowshed and Dairy Premises. The number of farms where milk is produced is 67 and the total number of cowsheds 94. During the year works of improvement were carried out as follows. On five farm premises new dairies were erected or the existing dairy improved, one new cowshed was erected and at the year end the erection of three new dairies on other farms were outstanding.

Milk (Special Designations) Order, 1936. There are nine producers of accredited milk resident in the Borough who are licensed by the County Council as the Licensing Authority. Supplementary licenses are issued to outside producers in respect of Tuberculin Tested, Pasteurised and Accredited milks.

Tuberculosis Order, 1925. Particulars relating to the enforcement of the above Order by the Borough Police during 1937, and which includes cases reported by County Veterinary Inspectors, are as follows:—

No. of premises in which disease reported ...	12
No. of animals in which disease confirmed ...	10
No. of animals in which disease not confirmed	3
No. of animals slaughtered :—	
(a) Cows in milk
(b) Other cows or heifers
(c) Other bovine animals

Meat and Other Foods. Apart from the Public Abattoir there are still the three private slaughter houses, two of which are used for pigs only.

Reference to Appendix 36 will show the numbers of animals slaughtered and the weight of meat, etc., found to be unfit for human consumption.

The weight of meat and offals found unfit for food at the Abattoir was nearly 48 tons and from the private slaughterhouses over 5½ tons. In addition, about 5 cwt.s. of various other foods were voluntarily surrendered by traders. The total weight of all food was 53 tons 16 cwt.s. The amount taken from the private slaughterhouses is about the same as last year, whereas the amount from the Abattoir is about 8 tons less than in 1936, although the numbers of animals slaughtered is about the same. This reduced amount is accounted for by a better quality of animal coming into the Abattoir than was the case in the preceding year.

The percentage of Beasts and Calves found to be infected with Tuberculosis to any extent was, at the Abattoir 26.5, and at the private slaughterhouses 11.9. The same disease incidence in Pigs was, at the Abattoir 7.6 per cent. and in the other private slaughterhouses 7.4 per cent.

The number of visits to Slaughterhouses was 156, and to shops where food was sold 491, while in addition, the food stalls in the Market were regularly visited.

Food and Drugs (Adulteration) Act, and Preservatives in Food Regulations. During the year 252 samples of food were submitted to the Public Analyst, 154 of these were of milk.

Appendix
37.

Of the total number of samples purchased, 154 were taken formally and 98 informally.

Thirteen samples of milk, four of beer and one of sweet spirit of nitre were found not to comply with the Regulations.

One sample of milk purchased at a Railway Station Refreshment Room was the subject of legal proceedings and subsequent payment of costs amounting to £4 6s. Od.

The four samples of beer were found to contain from 1/7th to 1/28th of a grain per gallon of lead. On the results of these analyses being made known to the respective Brewery Companies, steps were immediately taken to substitute other pipe work than that of lead.

With respect to the sample of sweet spirit of nitre this was an informal sample found to be deficient in Ethyl Nitrite to the extent of 44.8 per cent. A subsequent formal sample obtained from the same vendor was found to be genuine.

The average composition of all the milks was found to be Milk Fat 3.64 per cent., Solids-not-fat 8.82 per cent.

Rag Flock Acts, 1911 and 1928. There are no premises in the district affected by the requirements of these Acts.

HOUSING.

Appendix
39.
40.

During the year 350 houses were erected, 30 by the Local Authority and 320 by Private Enterprise.

Official Representations were made in respect of 2 Clearance Areas involving 15 houses and 52 persons to be displaced. In addition, 45 Demolition Orders were made in respect of Individual Houses involving the displacement of a further 223 persons. In respect of 13 other houses, undertakings were accepted to convert the houses for other usage than of human occupation, and in an additional 6 cases undertakings to re-condition were accepted.

Action during the year has, therefore, involved a total of 79 houses and the displacement of 275 persons. The Corporation provided 32 houses as alternative accommodation which involved the re-housing of 126 persons. The number of houses demolished was 24.

Reference to Appendix 40 shows the position of the Slum Clearance Programme. It will be seen that up to the 31st December, 1937, Official Representations had been made in respect of 524 houses, involving the displacement of 2,103 persons. The number of houses demolished was 249 and 1,207 persons had been re-housed by the Corporation in 271 houses.

A further 170 houses are identified for action in 1938, which will bring the gross total of the Programme to 694 houses and the possible displacement of a total of 2,778 persons.

For the year 1937, formal notices under Section 9 of the Housing Act, 1936, were served in respect of 68 houses for structural repair. The number of houses where such work was completed was 57. Other houses repaired as a result of informal notice numbered 165, making a total of houses extensively repaired, 222.

During the year, there were 23 cases of overcrowding relieved, involving the re-housing of 182 persons, and during 1937 39 cases of new overcrowding were discovered.

Appendices
13, 14, 15
& 16.

PREVALENCE OF, AND CONTROL OVER, INFECTIOUS DISEASES.

There has been a considerable decrease in the number of cases of infectious diseases notified during the year, there having been 547 notifications as against 621 in 1936, and this is mainly due to a marked fall in the incidence of Scarlet Fever during the year. Unfortunately, however, the incidence of Diphtheria has tended to increase, there

having been 235 cases notified during 1937 as against 194 in 1936. Energetic measures have been taken continuously during the year in this connection and it has not been found necessary to close any schools.

It is to be noted that the type of Diphtheria seems to be certainly tending to become more severe and I would strongly urge all parents to have their children between the ages of 1 -12 immunized. It is pleasing to note that more parents are realising the necessity for having this done as is evidenced by the fact that 1,500 children of school age and 100 children under school age were immunized during the year under review.

Ophthalmia Neonatorum. One case of this disease was notified. The case was treated at home and recovered with unimpaired vision. The arrangements for dealing with this disease remain as in previous years and are adequate and efficient.

Schick and Dick Tests for Diphtheria and Scarlet Fever. During 1937 all new staff at Penmore Isolation Hospital were Schick Tested and all found negative, and in future, all new staff will be so tested.

Disinfection of Premises. Routine disinfection of premises and bedding is carried out immediately after removal of cases of infectious disease to hospital, or in home nursed cases, after the period of infection is over.

Bacteriological Work. Bacteriological examinations in connection with infectious diseases are carried out at the County Health Laboratory, Derby, and a summary of these will be found in Appendix 15.

Appendix
15.

Supply of Diphtheria Antitoxin. On application to the Health Department, or the Maternity Home during holiday periods, concentrated diphtheria antitoxin is supplied free to all medical practitioners for use in the Borough.

)

TUBERCULOSIS.

During the period under review 64 cases of Tuberculosis were notified, and of this number 44 were pulmonary and 20 non-pulmonary cases. There were 48 deaths from this disease, which is an increase of 6 on last year's figures. The ward distribution will be found in Appendix 19.

Appendices
17, 18, 19.

All Tuberculosis work affecting the Borough is undertaken by the Derbyshire County Council, and I would like to take this opportunity of extending my grateful thanks to Dr. Robertson, the Area Tuberculosis Officer, for his continued help and co-operation.

Treatment. Facilities for the diagnosis and treatment of tuberculosis in Chesterfield are offered at the Brimington Road Clinic on Tuesdays and Fridays in each week and on

the first and third Monday of each month. Sanatorium treatment is provided at Walton Sanatorium and the Tuberculosis Pavilion at Penmore Hospital, while cases of Surgical Tuberculosis are treated at Bretby Hall Sanatorium.

*Appendix
18.*

A report on the attendance of Borough cases at the County Tuberculosis Dispensary in Brimington Road, and also on the cases treated in the Tuberculosis Pavilion at Penmore Hospital during 1937, will be found in Appendix 18.

After Care. The after care of these cases is carried out by the County Health Visitors, and this work is largely assisted by the Borough Welfare District Nursing Committee. Grants towards nursing and the supply of milk are made in certain cases by the County Council.

No action was taken during the year under either the Public Health (Prevention of Tuberculosis) Regulations, 1925, or Section 62 of the Public Health Act, 1925.

MATERNITY AND CHILD WELFARE.

MIDWIVES ACTS, 1902—1936.

*Appendix
28.*

During the year it was necessary to evolve a Municipal Midwifery Service for the Borough, to be put into force on the 1st August. This was done and a summary of the scheme put into force in the Borough is as follows:—

- (1) NUMBER OF MIDWIVES APPOINTED.
 - (a) One whole-time non-medical Inspector of Midwives.
 - (b) Seven whole-time District Midwives.
- (2) SALARIES OF MIDWIVES.
 - (a) Non-medical Supervisor of Midwives, £220—£250 by £10 per annum.
 - (b) Midwives holding C.M.B. but not State Registered Nurses, £180—£200 by £10 per annum.
 - (c) Midwives who are State Registered Nurses and hold C.M.B., £200—£220 by £10 per annum.
- (3) ALLOWANCES FOR MIDWIVES.
 - (a) Uniform, £10 per annum.
 - (b) Bicycle allowance, £5 per annum.
 - (c) Each midwife is provided with a telephone.
- (4) HOLIDAYS AND OFF DUTY TIME FOR MIDWIVES.

Four weeks' annual holiday; one week-end per month and one day per week.
- (5) GROUP SYSTEM OF WORKING AND FREEDOM OF CHOICE OF MIDWIFE.

The midwives work in two groups of two and one group of three, and this will allow as much freedom of choice of midwife to patient as is possible in a scheme of this nature.

(6) FEES CHARGED TO PATIENTS.

35/- in case of first confinement and 30/- in case of subsequent confinements where a midwife is acting as a midwife, and 25/- per case in all cases where a midwife is acting as a maternity nurse. A fee of 40/- is charged in all cases not previously booked.

From the 1st August to the end of the year under review 222 confinements were attended by the Municipal Midwives and it is pleasing to report that, so far, the scheme has worked smoothly and satisfactorily.

Twenty-three midwives notified their intention to practise in the Borough during 1937. Seven of them were appointed Municipal Midwives and five claimed compensation and surrendered their certificates during the year.

All the Midwives in the Borough have been regularly inspected and found to be carrying out their work satisfactorily.

During the year, 205 "Medical Help" forms were received from Midwives, and an analysis of these will be found in Appendix 28.

Maternal Mortality. There were two deaths during pregnancy and parturition, giving a maternal mortality rate of 1.9 as against 5.5 for 1936. The rate for England and Wales was 3.1.

Infantile Mortality. The number of infants dying before reaching the age of one year was 53, giving an infant mortality rate of 53, as against a rate of 59 for 1936. This is the lowest rate ever recorded, being six less than the rate for 1936, which was the previous lowest rate recorded. The infant mortality rate for the 125 Great Towns, with which Chesterfield is classified, was 62.

Appendices
8, 9 & 10.

Of the 994 children born in Chesterfield during 1937, 673 or 70 per cent. of them attended the Child Welfare Centres.

Still Births. During the year 43 legitimate and 1 illegitimate still births were registered.

Home Visiting. Home visiting, one of the most important duties of the Health Visitors, has been carried out on the same lines as hitherto. The Health Visitors paid 5,887 visits to the homes of children under one year of age, and 7,991 visits to children between the ages of one and five years, giving a total of 13,878 visits for 1937, as against 14,191 visits for 1936. The Health Visitors also paid 633 visits to expectant mothers and 362 other visits.

Appendix
27.

Infant Welfare Centres. Clinics are held on Mondays, Tuesdays and Wednesdays, at the Maternity Home; on Mondays at the Adult School, Whittington Moor; and on Tuesdays at the New Whittington Social Institute.

Appendix
26.

Each child attending a centre is weighed weekly, and charts of the weights and medical records of the children are kept. Advice is given on feeding and minor infantile disorders, and cases which require medical treatment are referred to their own private doctor. During 1937, 1,863 children made 21,359 attendances at the Centres, as against corresponding figures of 1,910 and 21,046 for 1936.

*Appendix
26(a).*

The arrangements for the dental treatment of children under school age attending the Infant Welfare Centres remain as before, and a summary of these during the period under review will be found in Appendix 26 (a).

*Appendix
26.*

Ante-Natal Clinic. The Ante-Natal Clinic is held at the Maternity Home on Thursdays and Fridays. During 1937, 577 women attended the Clinics, and the total number of attendances was 1,717.

Voluntary Help. I would like to take this opportunity of extending my grateful thanks to the Voluntary Helpers who have again during the period under review done very useful work at the Child Welfare Centres.

Free and Assisted Milk Scheme. Under this scheme expectant mothers, and children up to the age of three years, are eligible for a supply of milk if the family income is within the governing scale, and milk to the value of approximately £400 was supplied during 1937.

Infant Life Protection. At the beginning of 1937, there were seven foster-parents and seven children on the register, while at the end of the year the figures were respectively five and five. During the year the homes and children have been regularly inspected by the Health Visitors, and in all cases after their visits the reports have been satisfactory.

*Appendix
25.*

Maternity Home. During the year under review, 700 cases were admitted to the Maternity Home, an increase of 99 on last year's figures.

The Maternity Home is recognised as a training school for midwives and regular courses of lectures to midwives have been given.

The summary of work performed in the Home during 1937 will be found in Appendix 25.

I am indebted to Dr. Mackay, Resident Medical Officer, for the following report on the work of the Maternity Home during the year under review :—

With 700 admissions this year the Maternity Home has been working to full capacity, having averaged 30 daily occupied beds as against 26 last year. Of the daily average of 30 patients, 15 were Borough patients and 15 came from outside the Borough. There has been a marked increase in

the number and proportion of ordinary ward patients. They would be represented by 24 out of the 30, the remainder being private or semi-private room patients.

There has been about the average number of patients admitted for ante-natal treatment. The number of private Doctor's cases has increased and was 50 this year, twice the number of six years ago. The cases which had not booked beforehand but were admitted as emergencies by their own Doctors on account of complications having arisen, have shown a great increase in number this year. There have been 70 such cases, the highest number ever and twice the number of six years ago. This no doubt has a bearing on the following facts :—

There were 50 cases of abnormal presentations, more than ever before, and also more cases than ever of artificial delivery by forceps or Cæsarean section. The number of haemorrhage cases has equalled the highest record. Otherwise there has been the usual variety of complications arising before, during or after the birth and various baby ailments have been treated.

The stillbirth rate was the same as last year and slightly below the average for the last few years. There were two maternal deaths, representing a maternal mortality rate of 3.07.

APPENDIX 1.

PUBLIC HEALTH STAFF.

Medical Officer of Health and School Medical Officer—

† J. A. STIRLING, D.S.C., M.B., Ch.B., D.P.H.

Assistant Medical Officer of Health and Assistant School Medical Officer—

	Borough.	County.	Total.
No. of cases admitted since the opening	4,339	2,950	7,289
No. of cases admitted during 1937	366	334	700
No. of Babies born during year :—			
Live Births	339	276	615
Still Births	13	17	30
No. of Mothers discharged	384	311	695
No. of Mothers died ...	2	—	2
No. of Infants died ...	6	10	16
No. of cases remaining in the Home on December 31st, 1937 :—			
Mothers	17	23	40
Infants	16	18	34

APPENDIX 26.
Maternity and Child Welfare.

Attendances at each of the Maternity and Child Welfare Centres, 1937.

	Infants & Children Attending	Total Attend. made.	Average Weekly Attend.
Maternity Home—			
Monday	459	4,692	95.7
Tuesday	342	3,959	77.6
Wednesday	555	5,599	109.8
Adult School, Whittington Moor	352	4,761	97.2
Social Institute, New Whittington	155	2,348	40.6
	1,863	21,359	—

Summary of Work done at Infant Welfare Centres and Ante-Natal Clinics.

Total No. of Children attending Centres	1,863
Total Attendances	21,359
No. of Children who made first attendances	733
No. of visits made by these children	7,376
No. of children attending in current year who attended in previous year	1,130
No. of visits made by these children	13,983
No. of new attenders under 1 year of age	673
No. of new attenders between 1—5 years of age	60

Ante-Natal Clinic.

No. of first attendances	499
No. of re-attendances	1,218

Methods of Feeding on First Attendance at the Centres.

Natural (Breast)	466
Artificial (various)	144
Combined (Natural and Artificial)	52
Children over 1 year—various diets	66
Breast feeding over 1 year of age	5
Total	733

APPENDIX 26(a).

The following table is a summary of the work carried out during the year 1937 at the Maternity and Child Welfare Dental Clinic, held on Saturday mornings for children of pre-school age.

Age under 1 year	—
„ 1 year	3
„ 2 years	9
„ 3 years	43
„ 4 years	42
„ 5 years	—
Total	97

Number of Temporary Extractions	177
„ Temporary Fillings	5
„ Dressings	38
„ Local Anæsthetics for Extractions	86
„ Attendances made by children for treatment	101

The amount received from parents for Dental Treatment of children of pre-school age was £3.

APPENDIX 27.**Summary of Work done by the Health Visitors during the year.**

Number of first visits to infants	1,019
.. re-visits to infants	4,868
.. visits to children 1—5 years	7,991
.. first visits to expectant mothers	235
.. re-visits to expectant mothers	398
.. Sanitary defects reported to Sanitary Inspectors	16
.. other visits	362

APPENDIX 28.**Midwives' Acts, 1902—1936.****No. of Cases attended, Year 1937.**

	By Municipal Midwives.	By Independent Midwives.	Total.
(a) As Midwives	... 196	... 329	... 525

APPENDIX 39.

HOUSING.

The following is a tabular statement of work done in regard to housing in 1937:—

1. Inspection of dwellinghouses during the year:—

(1) (a) Total number of dwellinghouses inspected for housing defects (under Public Health or Housing Acts)	315
(b) Number of inspections made for the purpose	315
(2) (a) Number of dwellinghouses (included under sub-head (1) above), which were inspected and recorded under the Housing Consolidated Regulations, 1925	264
(b) Number of inspections made for the purpose	264
(3) Number of dwellinghouses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	87
(4) Number of dwellinghouses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	223

2. Remedy of Defects during the year without service of formal notices:—

Number of defective dwellinghouses rendered fit in consequence of informal action by the Local Authority or their officers	165
--	-----

3. Action under Statutory Powers during the year:—

A.—Proceedings under Sections 9, 10 and 16 of the Housing Act, 1936.

(1) Number of dwellinghouses in respect of which notices were served requiring repairs	...	68
(2) Number of dwellinghouses which were rendered fit after service of formal notices:—		—
(a) By Owners	...	57
(b) By Local Authority in default of Owners	...	—

B.—Proceedings under Public Health Acts.

(1) Number of dwellinghouses in respect of which notices were served requiring defects to be remedied	—
(2) Number of dwellinghouses in which defects were remedied after service of formal notices:					—
(a) By Owners	—
(b) By Local Authority in default of Owners	—

C.—Proceedings under Sections 11 and 13 of the Housing Act, 1936.

(1) Number of dwellinghouses in respect of which Demolition Orders were made	45
(2) Number of dwellinghouses demolished in pursuance of Demolition Orders	24

D.—Proceedings under Section 12 of the Housing Act, 1936.

(1) Number of separate tenements or underground rooms in respect of which Closing Orders were made	—
(2) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit	—

4. Housing Act, 1936—Part IV.—Overcrowding.

(a) (i) Number of dwellings overcrowded at the end of the year	332
(ii) Number of families dwelling therein	...	389		
(iii) Number of persons dwelling therein	...	2668		
(b) Number of new cases of overcrowding reported during the year	39
(c) (i) Number of cases of overcrowding relieved during the year	23
(ii) Number of persons concerned in such cases	182
